

Drivesocket inspection

Please inspect your track drive shaft and see if the drivewheels have moved outward on the shaft?
Best is to take a measurement during pre-race check and keep measuring during race and after!

We have seen this on some sleds that raced at Pine Lake and are working on a resolution.

For now you will have to press the wheels back in place.
You can find the dimensions in your owners / performance book on page 75 upper right.

If your drivers has moved, please let us know so we can forward this to Arctic Cat!
